

0.9m | 3ft Sentinel® High Performance Antenna, dual-polarized, 14.400 - 15.350 GHz, PBR Flange, White Antenna, Grey Radome

#### **Product Classification**

Product Type Microwave antenna

Product Brand Sentinel®

General Specifications

Antenna Type SHPX - Sentinel® High Performance Antenna, dual-

polarized

PolarizationDualAntenna InputPBR140

Antenna Color White

**Reflector Construction**One-piece reflector

Radome Color Gray

Radome Material Composite Broadband

Flash Included No
Side Struts, Included 0
Side Struts, Optional 1

**Dimensions** 

**Diameter, nominal** 0.9 m | 3 ft

**Electrical Specifications** 

Operating Frequency Band 14.400 – 15.350 GHz

Gain, Low Band41.3 dBiGain, Mid Band41.7 dBiGain, Top Band42.1 dBiBoresite Cross Polarization Discrimination (XPD)30 dB

Front-to-Back Ratio 73 dB

Beamwidth, Horizontal 1.5 °

Page 1 of 6

Return Loss 17.7 dB

**VSWR** 1.3

Radiation Pattern Envelope Reference (RPE) 7298B

**Electrical Compliance**Brazil Anatel Class 2 | Canada SRSP 314.5 Part

C | ETSI 302 217 Class 4

Cross Polarization Discrimination (XPD) Electrical Compliance ETSI EN 302217 XPD Category 3

Mechanical Specifications

**Compatible Mounting Pipe Diameter** 90 mm – 120 mm | 3.5 in – 4.7 in

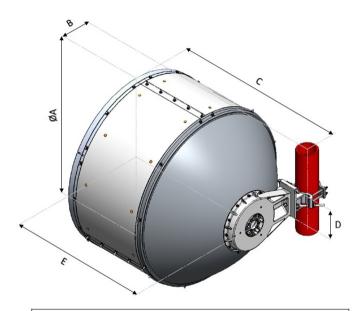

Fine Azimuth Adjustment Range ±15°

Fine Elevation Adjustment Range ±15°

Wind Speed, operational 180 km/h | 111.847 mph

Wind Speed, survival 250 km/h | 155.343 mph

#### Antenna Dimensions and Mounting Information

Dimensions in inches (mm)					
Antenna Size, ft (m)	А	В	С	D	E
3 (0.9)	38.9 (987)	16 (407)	33.7 (855)	7.2 (183)	34.9 (887)

#### Wind Forces at Wind Velocity Survival Rating

**Axial Force (FA)** 3353 N | 753.785 lbf

 Weight, net
 24 kg | 52.911 lb

Regulatory Compliance/Certifications

Agency Classification

CHINA-ROHS Below maximum concentration value

ISO 9001:2015 Designed, manufactured and/or distributed under this quality management system

REACH-SVHC Compliant as per SVHC revision on www.andrew.com/ProductCompliance

ROHS Compliant UK-ROHS Compliant

#### \* Footnotes

Operating Frequency Band

Bands correspond with CCIR recommendations or common

allocations used throughout the world. Other ranges can be

accommodated on special order.

Gain, Mid Band For a given frequency band, gain is primarily a function of

antenna size. The gain of Andrew antennas is determined by either gain by comparison or by computer integration of the

measured antenna patterns.

**Boresite Cross Polarization Discrimination (XPD)**The difference between the peak of the co-polarized main

beam and the maximum cross-polarized signal over an angle twice the 3 dB beamwidth of the co-polarized main beam.

**Front-to-Back Ratio**Denotes highest radiation relative to the main beam, at 180°

±40°, across the band. Production antennas do not exceed rated values by more than 2 dB unless stated otherwise.

**Return Loss**The figure that indicates the proportion of radio waves

incident upon the antenna that are rejected as a ratio of

those that are accepted.

**VSWR** Maximum; is the guaranteed Peak Voltage-Standing-Wave-

Ratio within the operating band.

**Radiation Pattern Envelope Reference (RPE)**Radiation patterns define an antenna's ability to discriminate

against unwanted signals. Under still dry conditions, production antennas will not have any peak exceeding the current RPE by more than 3dB, maintaining an angular

accuracy of +/-1° throughout

**Cross Polarization Discrimination (XPD) Electrical Compliance** The difference between the peak of the co-polarized main

beam and the maximum cross-polarized signal over an angle twice the 3 dB beamwidth of the co-polarized main beam.

Wind Speed, operational For VHLP(X), SHP(X), HX and USX antennas, the wind speed

where the maximum antenna deflection is  $0.3\,\mathrm{x}$  the 3 dB beam width of the antenna. For other antennas, it is defined

Page 5 of 6

Wind Speed, survival

The maximum wind speed the antenna, including mounts

and radomes, where applicable, will withstand without permanent deformation. Realignment may be required. This wind speed is applicable to antenna with the specified amount of radial ice.

Axial Force (FA)

Maximum forces exerted on a supporting structure as a result of wind from the most critical direction for this parameter. The individual maximums specified may not occur simultaneously. All forces are referenced to the

mounting pipe.

Side Force (FS)

Maximum side force exerted on the mounting pipe as a result of wind from the most critical direction for this parameter. The individual maximums specified may not occur simultaneously. All forces are referenced to the mounting pipe.

**Twisting Moment (MT)**Maximum forces exerted on a supporting structure as a result of wind from the most critical direction for this parameter. The individual maximums specified may not occur simultaneously. All forces are referenced to the

mounting pipe.

Packaging Type

Andrew standard packing is suitable for export. Antennas are shipped as standard in totally recyclable cardboard or wirebound crates (dependent on product). For your convenience,

Andrew offers heavy duty export packing options.

as a deflection is equal to or less than 0.1 degrees.
