

Statement on Euro-pallets and stretch wrap foil for transport packaging

Commscope uses **EPAL pallets (Euro-pallets)** among other wooden pallets. These pallets are produced from wood, and they are treated under the ISPM15 requirements. These pallets are reusable and after they have completed their lifecycle, they are fully recyclable (recycling material code FOR 50).

Stretch wrap foils used on CommScope's transportation packaging to secure our products on the pallets are monomer plastic materials like PE-HD (02), PE-LD (04) and PP (05). These are 100% recyclable materials and in some cases they might contain post-consumed materials depending on the supply chain availability. **Bubble wrap, bubble bags, plastic bags and foils** used to pack products are made from the same monomer materials with the same characteristics as the stretch wrap foils and are 100% recyclable.

Low density polyethylene (LDPE)	
High density polyethylene (HDPE)	
Polypropylene (PP)	

Foam buffers and inserts are produced using EPE and in some cases EPP foams. These materials are also 100% recyclable and in some cases they might contain post-consumed materials depending on the supply chain availability.

Expanded Polyethylene (EPE) foam	
Polypropylene (PP) foam	
Polyurethane (PU) foam	

Corner protection used to secure and protect the boxes on the pallets are produced from folding box board or paper and they are fully recyclable.
